Link more crimes to vehicle-related leads

PlateRanger advanced vehicle recognition uncovers key investigative leads faster

Staffing shortages slow investigations and the ability to quickly locate suspects and close cases. Siloed data collection also takes additional time, making locating suspects or investigative leads more difficult.

Empower your investigations with PlateRanger™ powered by Rekor®, the industry-leading license plate recognition (LPR) and Advanced Vehicle Recognition solution. Leveraging the advanced capabilities of artificial intelligence and machine learning, PlateRanger offers accuracy and efficiency while easily integrating across existing systems and future platforms.

PlateRanger's vehicle and plate identification algorithms have been trained over many years and million of images to be highly accurate and dependable in identifying vehicles and license plates from every state. That data is shared in real-time to streamline investigations and enhance officer safety through situational awareness.
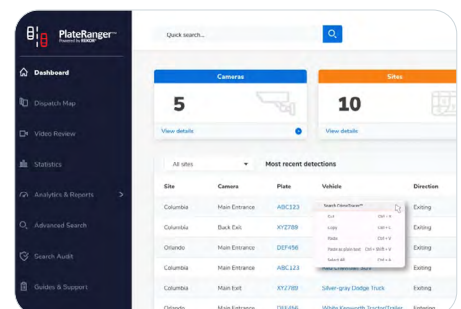

Designed for public safety, PlateRanger integrates seamlessly with other application including real-time crime center, video management systems, and the ShotSpotter and the SafetySmart Platform integrations will be available in Q1 2025. PlateRanger can also use hot lists based on integration with NCIC and other data such as Amber and Silver alerts, and more.

Benefits

☑ Connects criminal vehicle associations through advanced analytics

☑ Creates faster, more relevant investigative leads

☑ Force multiplier that optimizes resource allocation and stream-lines investigative processes

☑ Integrates with leading law enforcement databases and software

Increased Investigative Capacity

- Accelerates investigations through data, creating actionable leads from vehicle make, model, color, direction of travel and license plate recognition.
- Streamline investigative processes to locate potential suspects and identify witnesses.
- Coming in Q1 2025, PlateRanger integration with CrimeTracer will offer a nationwide investigative ability for vehicle reads to maximize resources and improve investigative efficiency.
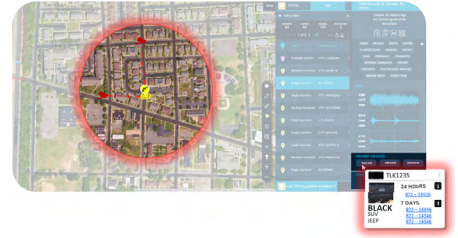

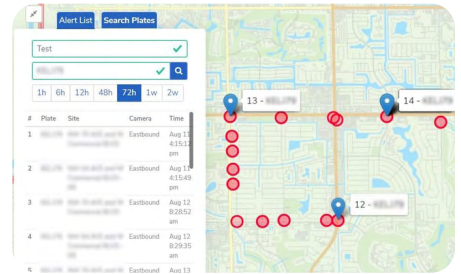

Real-time Insights

- Use live video feeds to capture crucial moments around criminal events, improving response and providing investigative value.

- Real-time alerts from integrated systems are sent once a vehicle of interest is recognized, enhancing officer safety through situational awareness.

- ShotSpotter integration will identify vehicles involved in gun-related crimes starting Q1 2025.

Robust Integrations

- Real-time alerts integrated with critical systems, providing BOLOs, NCIC hits, Amber and Silver alerts, and more.

- Quickly share LPR data through APIs to automate workflow and reduce data errors.

- Integrate real-time email and SMS notifications for seamless Hot List alerts.

PlateRanger Features

- Real-time insights through live HD video capture and playback
- Holistic data-sharing solution with configurable data retention
- Versatile deployments in areas with limited power availability
- Intuitive user interface

- Cost-effective solution
- NCIC and Amber Alerts integration
- Secure and CJIS/Fed-Ramp Compliant
- Integrated ShotSpotter Insights with historical tracking

- Privacy settings to auto-delete PlateRanger scanned data depending on applicable policies
- Comprehensive analytics to uncover criminal vehicle insights
- Trackable user activity
- Effective night images providing 24-hour detection of criminal activity

- Real time alerts on Hot Lists reads
- Expedite suspect apprehension and unlock witness insight
- Exceptional customer support 24/7/365
- Rekor Edge Pro covers up to 2 lanes, 75 ft max range, and 70 mph max speed

Elevate your investigative capabilities and improve community safety with PlateRanger™ powered by Rekor®.
